

SELF-ESTEEM AND HOSTILITY AMONG UPPER PRIMARY SCHOOL STUDENTS

Name of the student : SOUMYA K
Name of the supervising teacher : Dr. K. VIJAYAKUMARI
Year of study : 2012

OBJECTIVE

- To find out the extent of self-esteem and hospitality among upper primary school students
- To find out whether there exists any significant mean difference in self-esteem between groups based on Gender, locale and type of management
- To find out the influence of self-esteem on hostility among upper primary school students

METHODOLOGY

Method : survey
Sample : 500 students
Tool : Self-esteem inventory, Multiphase holistic inventory
Statistical technique : descriptive statistic, ANOVA, t-test

RESULT

The study revealed that upper primary school students have self-esteem only at a moderate level. There exists a significant difference in self-esteem of boys and girls and students of government and aided schools as well as that of students in rural and urban areas. Findings of the study reveal that there is hostility among upper primary school students at a moderate level. Students of rural and urban area do not differ in their hostility.

KEYTERMS: Self-esteem, hostility
